

Dataloggers - Getting Started

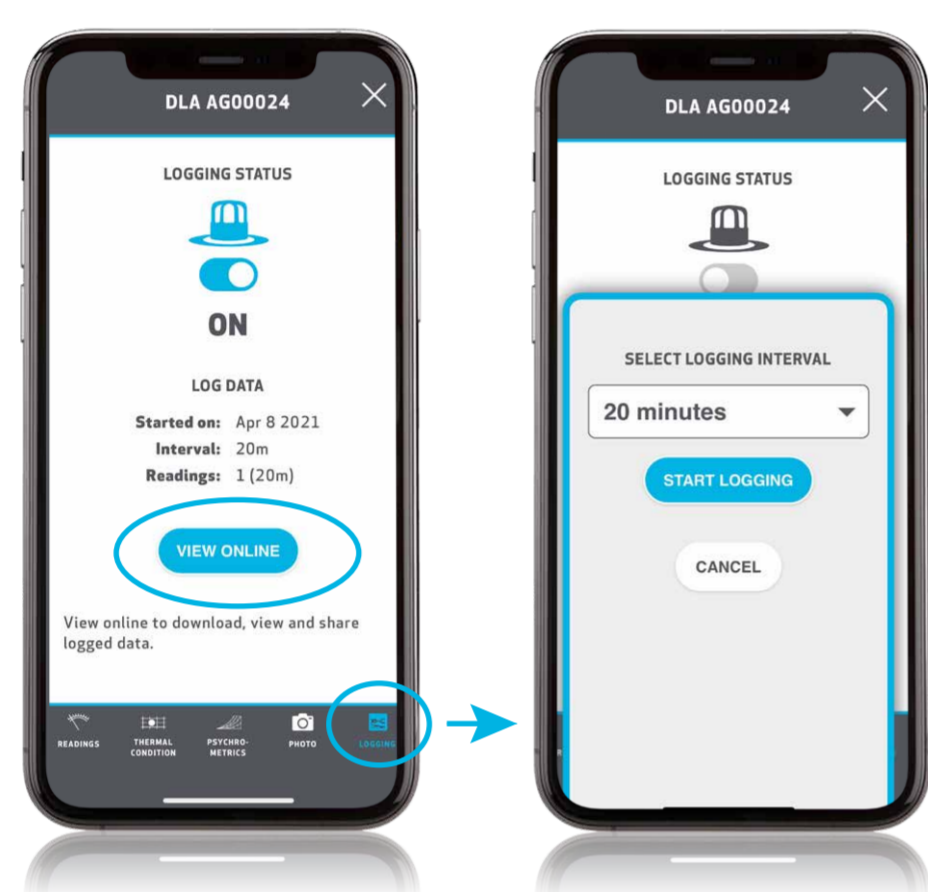

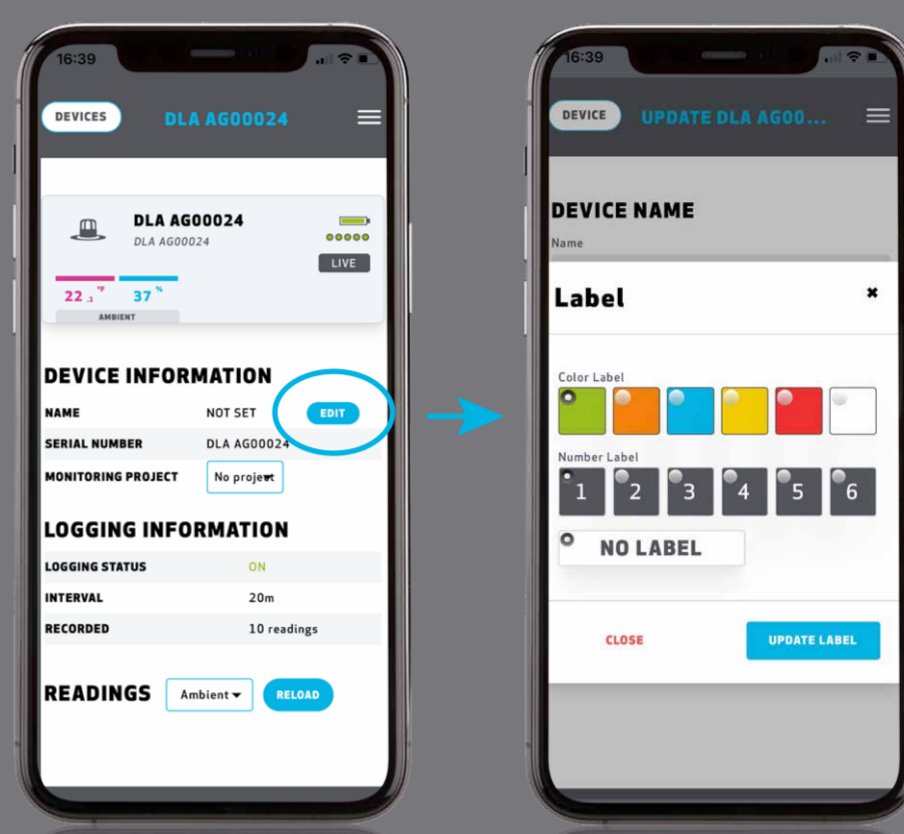

Your Datalogger Device

1. Make sure the 'Remove Before Use' battery tab and dust cover are removed. Readings cannot be taken with dust cover on.
2. Connect the optional contact temperature probe.
3. Ensure the O/I button is switched to I. This starts the logger transmitting to the app.

Label the Device

Now that your device is registered, and if you have multiple devices, you can label each Feedback Data Logger with a different color/number combination to allow easy identification.

Tap 'edit' in the Device Information to assign it a color and number.

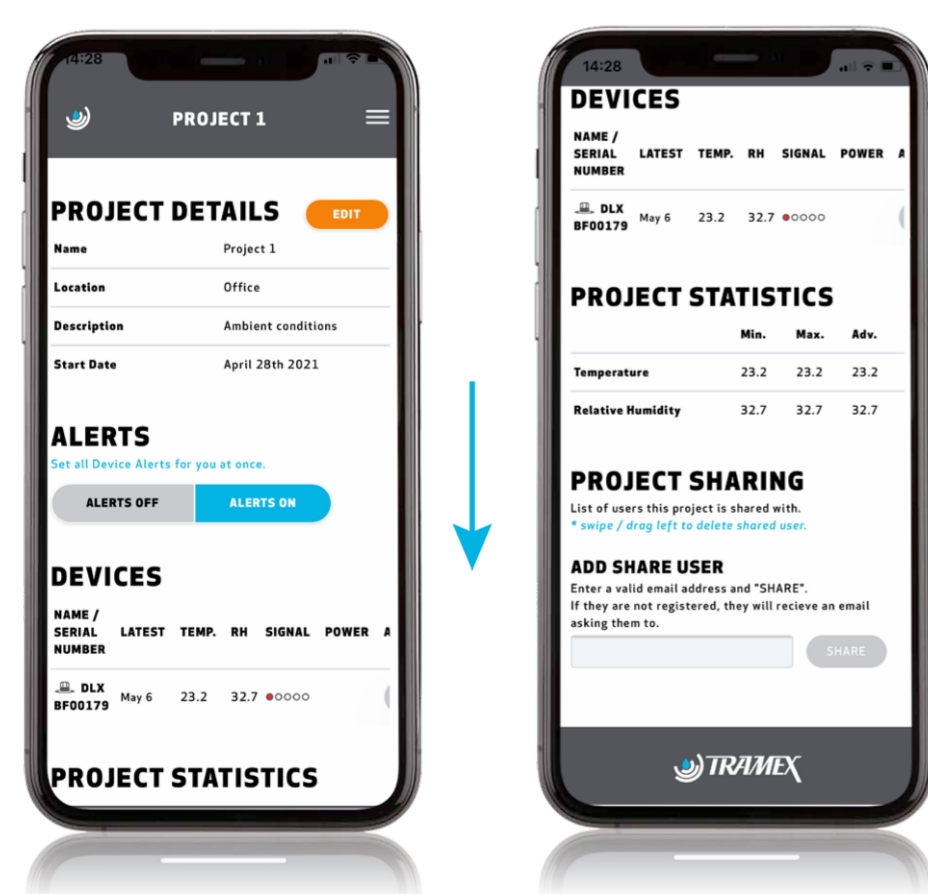

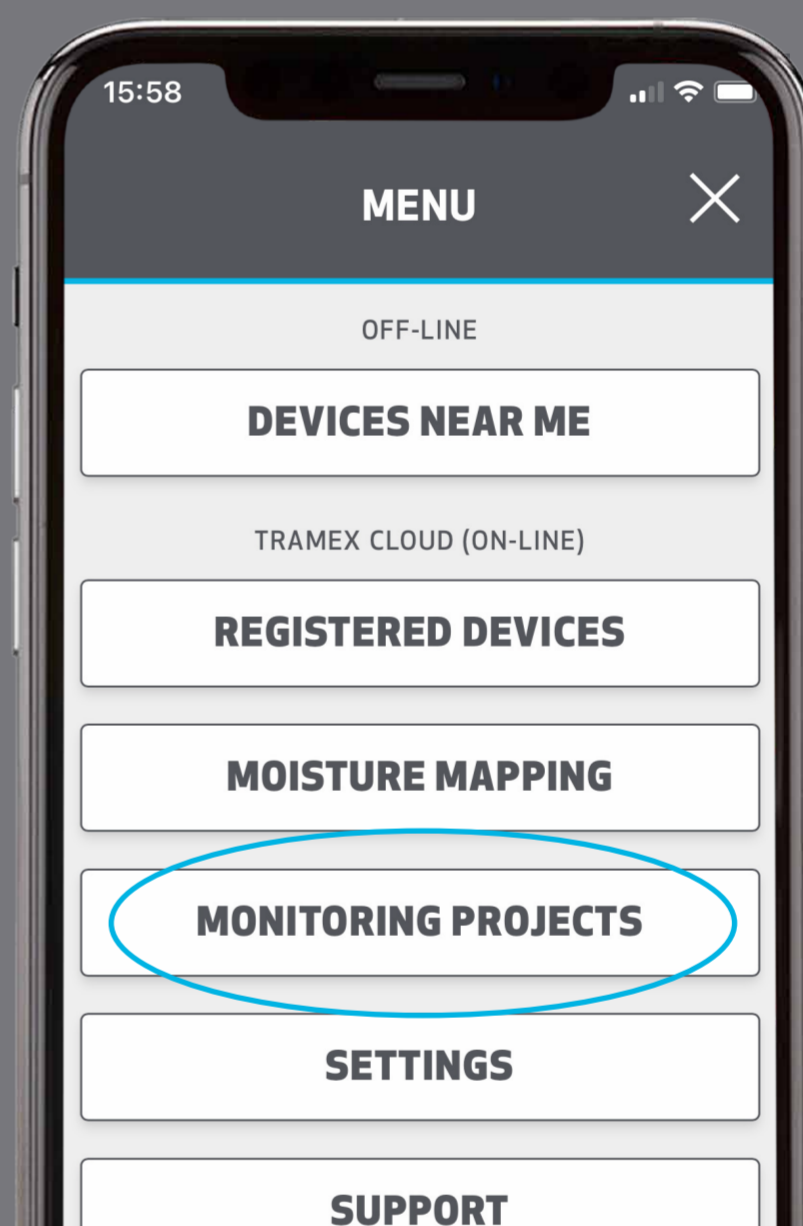

Start Logging

In the Logging Information you can switch Logging ON or OFF and choose the logging interval.

Tap 'View Online' to see the logging data.

Monitoring Projects

From the Menu, select 'Monitoring Projects' to add a new project or select an existing project.

Project Sharing

Click 'Edit' to enter your Project details.

Scroll down to see an overview of Devices and Statistics and to share your project data with other users.

Adding Devices to Projects

Select the Device you would like to add to the project. Then choose the required Monitoring Project from the drop down in 'Device Information'.
